Transportation Policy

DOC-001 | Version 3.0 | Effective 2026-01-01 | ACTIVE

SYNTHETIC CONTROLLED CORPUS — RV032 DRAFT. Operational details introduced here are proposed test-universe definitions, not verified real-company policy.

1. Purpose and authority

This active corporate policy establishes transportation service targets and escalation governance. It supersedes DOC-002, Transportation Policy v2.0 (2024). Where historical values differ, the active policy governs current operations.

Applies to domestic transportation operations, including contracted carriers and business-critical deliveries. Detailed operational procedures remain in DOC-003 and DOC-009.

2. National OTIF performance

OTIF (On Time In Full) measures deliveries that are both on time and in full divided by total deliveries. The national target is **97%** from **2026-01-01**. The prior target was **95%** through 2025-12-31; the change was approved during 2025.

OTIF definition and additional carrier performance indicators are maintained in DOC-013. Operational source systems remain authoritative for actual delivery records.

3. Transportation service categories — controlled synthetic detail

Standard: delivery within 5 business days after dispatch; Express: within 2 business days; Critical: the approved commitment specified in the critical-delivery record, with an initial target of next business day when operationally feasible. These category-level SLAs are **proposed synthetic definitions** for RV032 and require acceptance before benchmark freeze.

On-time status is assessed against the documented category commitment. No service category overrides an approved exception or a more specific signed contract.

4. Critical deliveries

A critical delivery is a shipment explicitly classified as business-critical under the active Critical Delivery SOP (DOC-009). Classification must be recorded; urgency alone does not automatically qualify.

Delayed critical deliveries require the defined escalation workflow in DOC-009. The policy establishes this obligation but does not replace the SOP's detailed qualifying criteria, contacts, and deadlines.

5. Carrier governance and exceptions

Repeated SLA breach for three consecutive weeks requires escalation under DOC-003. Carrier replacement, corrective actions and performance review are governed by DOC-003 and applicable contracts.

Exceptions must be documented, time-limited and approved by the designated owner. Historical documents may be consulted for context but are not current operational authority.

6. Traceability

Related sources: DOC-002 (superseded historical policy), DOC-003 (Carrier Management Policy), DOC-009 (Critical Delivery SOP), DOC-013 (Logistics KPI Dictionary), DOC-019 (2025 committee minutes).

Benchmark coverage: Q02, Q06, Q10; supporting context for Q07, Q08, Q09, Q11 and Q28.
