Supplier Risk Policy

DOC-004 | Version 1.4 | Effective 2026-01-01 | ACTIVE

Scope

Defines risk classification for transportation and other suppliers. Active 2026-01-01. Supplier risk classification is distinct from contractual penalties and procurement approval.

High-risk carrier criteria

Classify a carrier high risk when any one of these documented triggers applies: severe unresolved safety or regulatory finding; confirmed material information-security breach; insolvency or material inability to deliver; or repeated critical SLA breaches without an approved effective recovery plan.

Risk review

Risk and Procurement jointly document evidence, severity, mitigating controls, review owner and date. Three consecutive weeks below SLA trigger escalation under DOC-003; this alone does not automatically determine high-risk status without assessment.

Outcome

Risk owner records High, Medium or Low classification and next review date. High-risk carriers require an approved mitigation or replacement plan before new critical allocations.
