SUPPLIER MANAGEMENT POLICY

Document ID: DOC-022 | Version: 3.0 | Effective: 2026-01-01 | Status: ACTIVE | Domain: Supplier Management

1. Purpose

Establish enterprise requirements for supplier onboarding, approval, performance governance, risk management, renewal, suspension, and termination.

2. Current policy version

Version 3.0 is the active Supplier Management Policy effective 1 January 2026. Prior versions are not current operating authority.

3. Supplier onboarding

A supplier must complete the active Supplier Onboarding SOP before normal activation. Required evidence must be validated by the responsible business owner and Procurement.

4. Approval and contracting

Commercial commitments must follow the Approval Authority Matrix. Emergency need does not remove approval requirements; it may activate an expedited process when the matrix explicitly permits it.

5. Performance and risk

Supplier performance and supplier risk are related but distinct. Performance is monitored through domain-specific indicators; enterprise risk classification follows the Supplier Risk Policy.

6. Corrective action and suspension

Material or repeated failures require documented corrective action. Suspension or replacement decisions must consider business continuity, contractual obligations, risk, and available alternatives.

7. Records

Onboarding evidence, approvals, risk assessments, performance cases, corrective actions, and termination decisions must be retained according to enterprise governance requirements.
